

The best use of the ITFS/MDS spectrum is for unlicensed usage. As a medical student, I am embarking on a lifelong learning experience and having quick and easy wireless web access allows me to learn more quickly and effectively and also to deliver better, faster, and cheaper patient care. The medical sciences rely heavily on the internet for access to the most up to date studies and recommendations, and having more ITFS/MDS spectrum for unlicensed usage is necessary to allow us unfettered access to information. This is just one example of how more unlicensed spectrum can help our society. I am sure many more people would benefit from it in more ways than I can imagine. If it is all controlled by corporations, this wonderful resource will become as burdensome as our telephone system already is.
